Fire Stopping and Penetration Sealing

Penetration sealing systems are a fundamental requirement of the fire safety design in buildings. Often a neglected part of the building's fire protection and installed by nonspecialists they are nevertheless vital in maintaining compartmentation and preventing the spread of fire and smoke.

Effective penetration sealing prevents the passage of smoke, toxic gasses and fire through gaps around services in walls, partitions and floors as well as enhancing acoustic performance and air sealing properties.

Intumescent Sealants

Intumescent Sealant systems are water based acrylic intumescent or silicone based fire protection sealants. Adhering to most types of surface, which when cured form a nonhardening seal; preventing the passage of smoke, toxic gases and fire for up to 240 minutes fire protection.

Gas Suppression Systems

Vehicles

Design, supply, installation and servicing form part of the core service of Fire Extinguisher Services. Our fire suppression systems are uniquely designed to fulfill the need of any vehicle and situation.

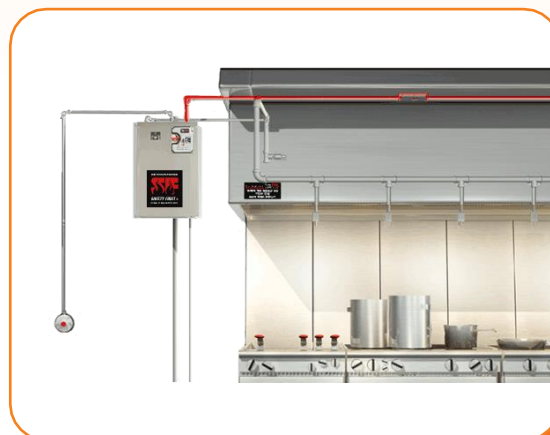

ANSUL, MANTA, MANTIS, Fire Suppression Systems.
